Greenwich Road
CONSULTING LTD

Expert advice at $0 out-of-pocket cost

Looking for ways to lower energy bills and improve resident comfort?

Greenwich Road Consulting can help your home explore practical improvements through the Climate Ready Infrastructure Service (CRIS).

What could your home improve:

- Rising energy and water bills
- Summer heat and severe weather preparedness
- Aging heating and ventilation equipment
- Something else particular to your home ….

The CRIS program connects eligible organizations with experts to identify options that support resident comfort, safety, and lower operating costs. The program pays the experts directly for approved advisory work.

Who can take part

Not-for-profit and municipally owned long-term care homes may be eligible. Windsor Elms Village, Hillside Pines, and Miner's Memorial have already used CRIS with Greenwich Road Consulting.

Getting started is easy

1. **Start with a conversation.** Tell us what you would like to improve.
2. **We help with the application.** We support the screening application and join the CRIS call to confirm the scope.
3. **Begin once approved.** Together, we explore practical options for your home.

Let's talk about your home

A short call is all it takes to explore whether CRIS is a fit.
